

AUTISM AWARENESS SERIES

The Engine and the Exhaust

Same underlying causes, different presentations

#8 — Processing Variance

raphink.info/autism

**MILD
AUTISM**

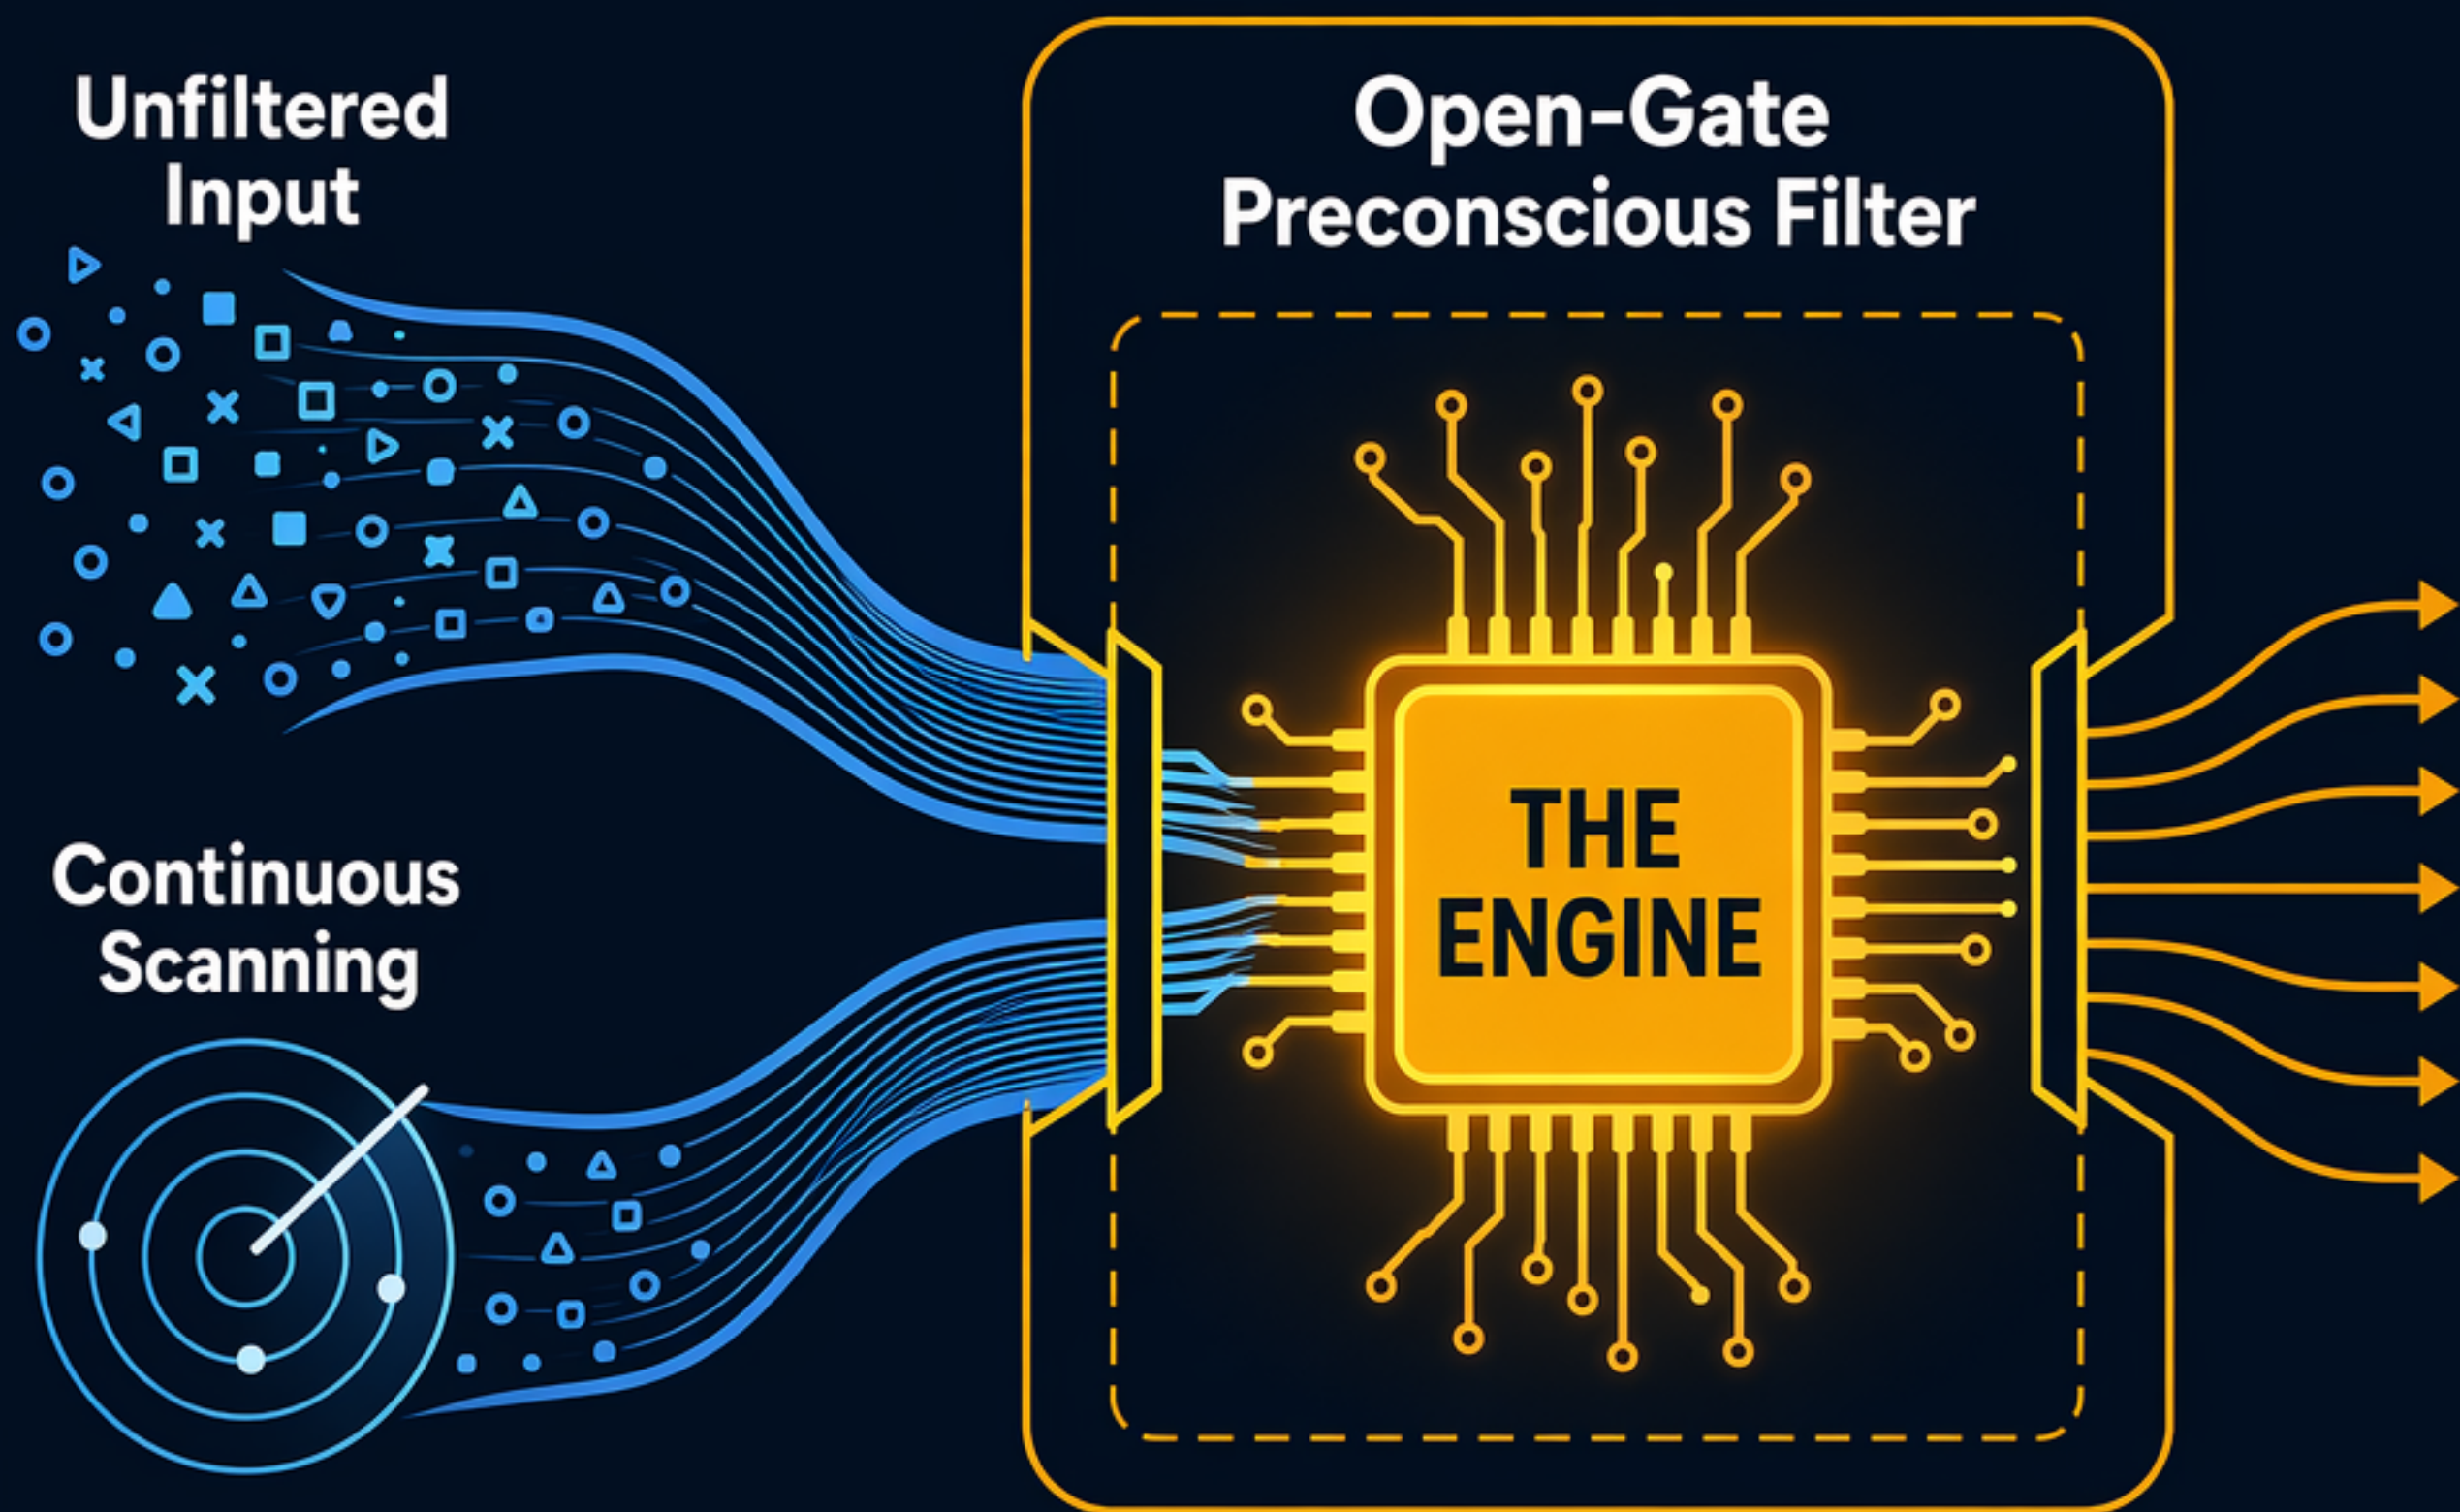

**SEVERE
AUTISM**

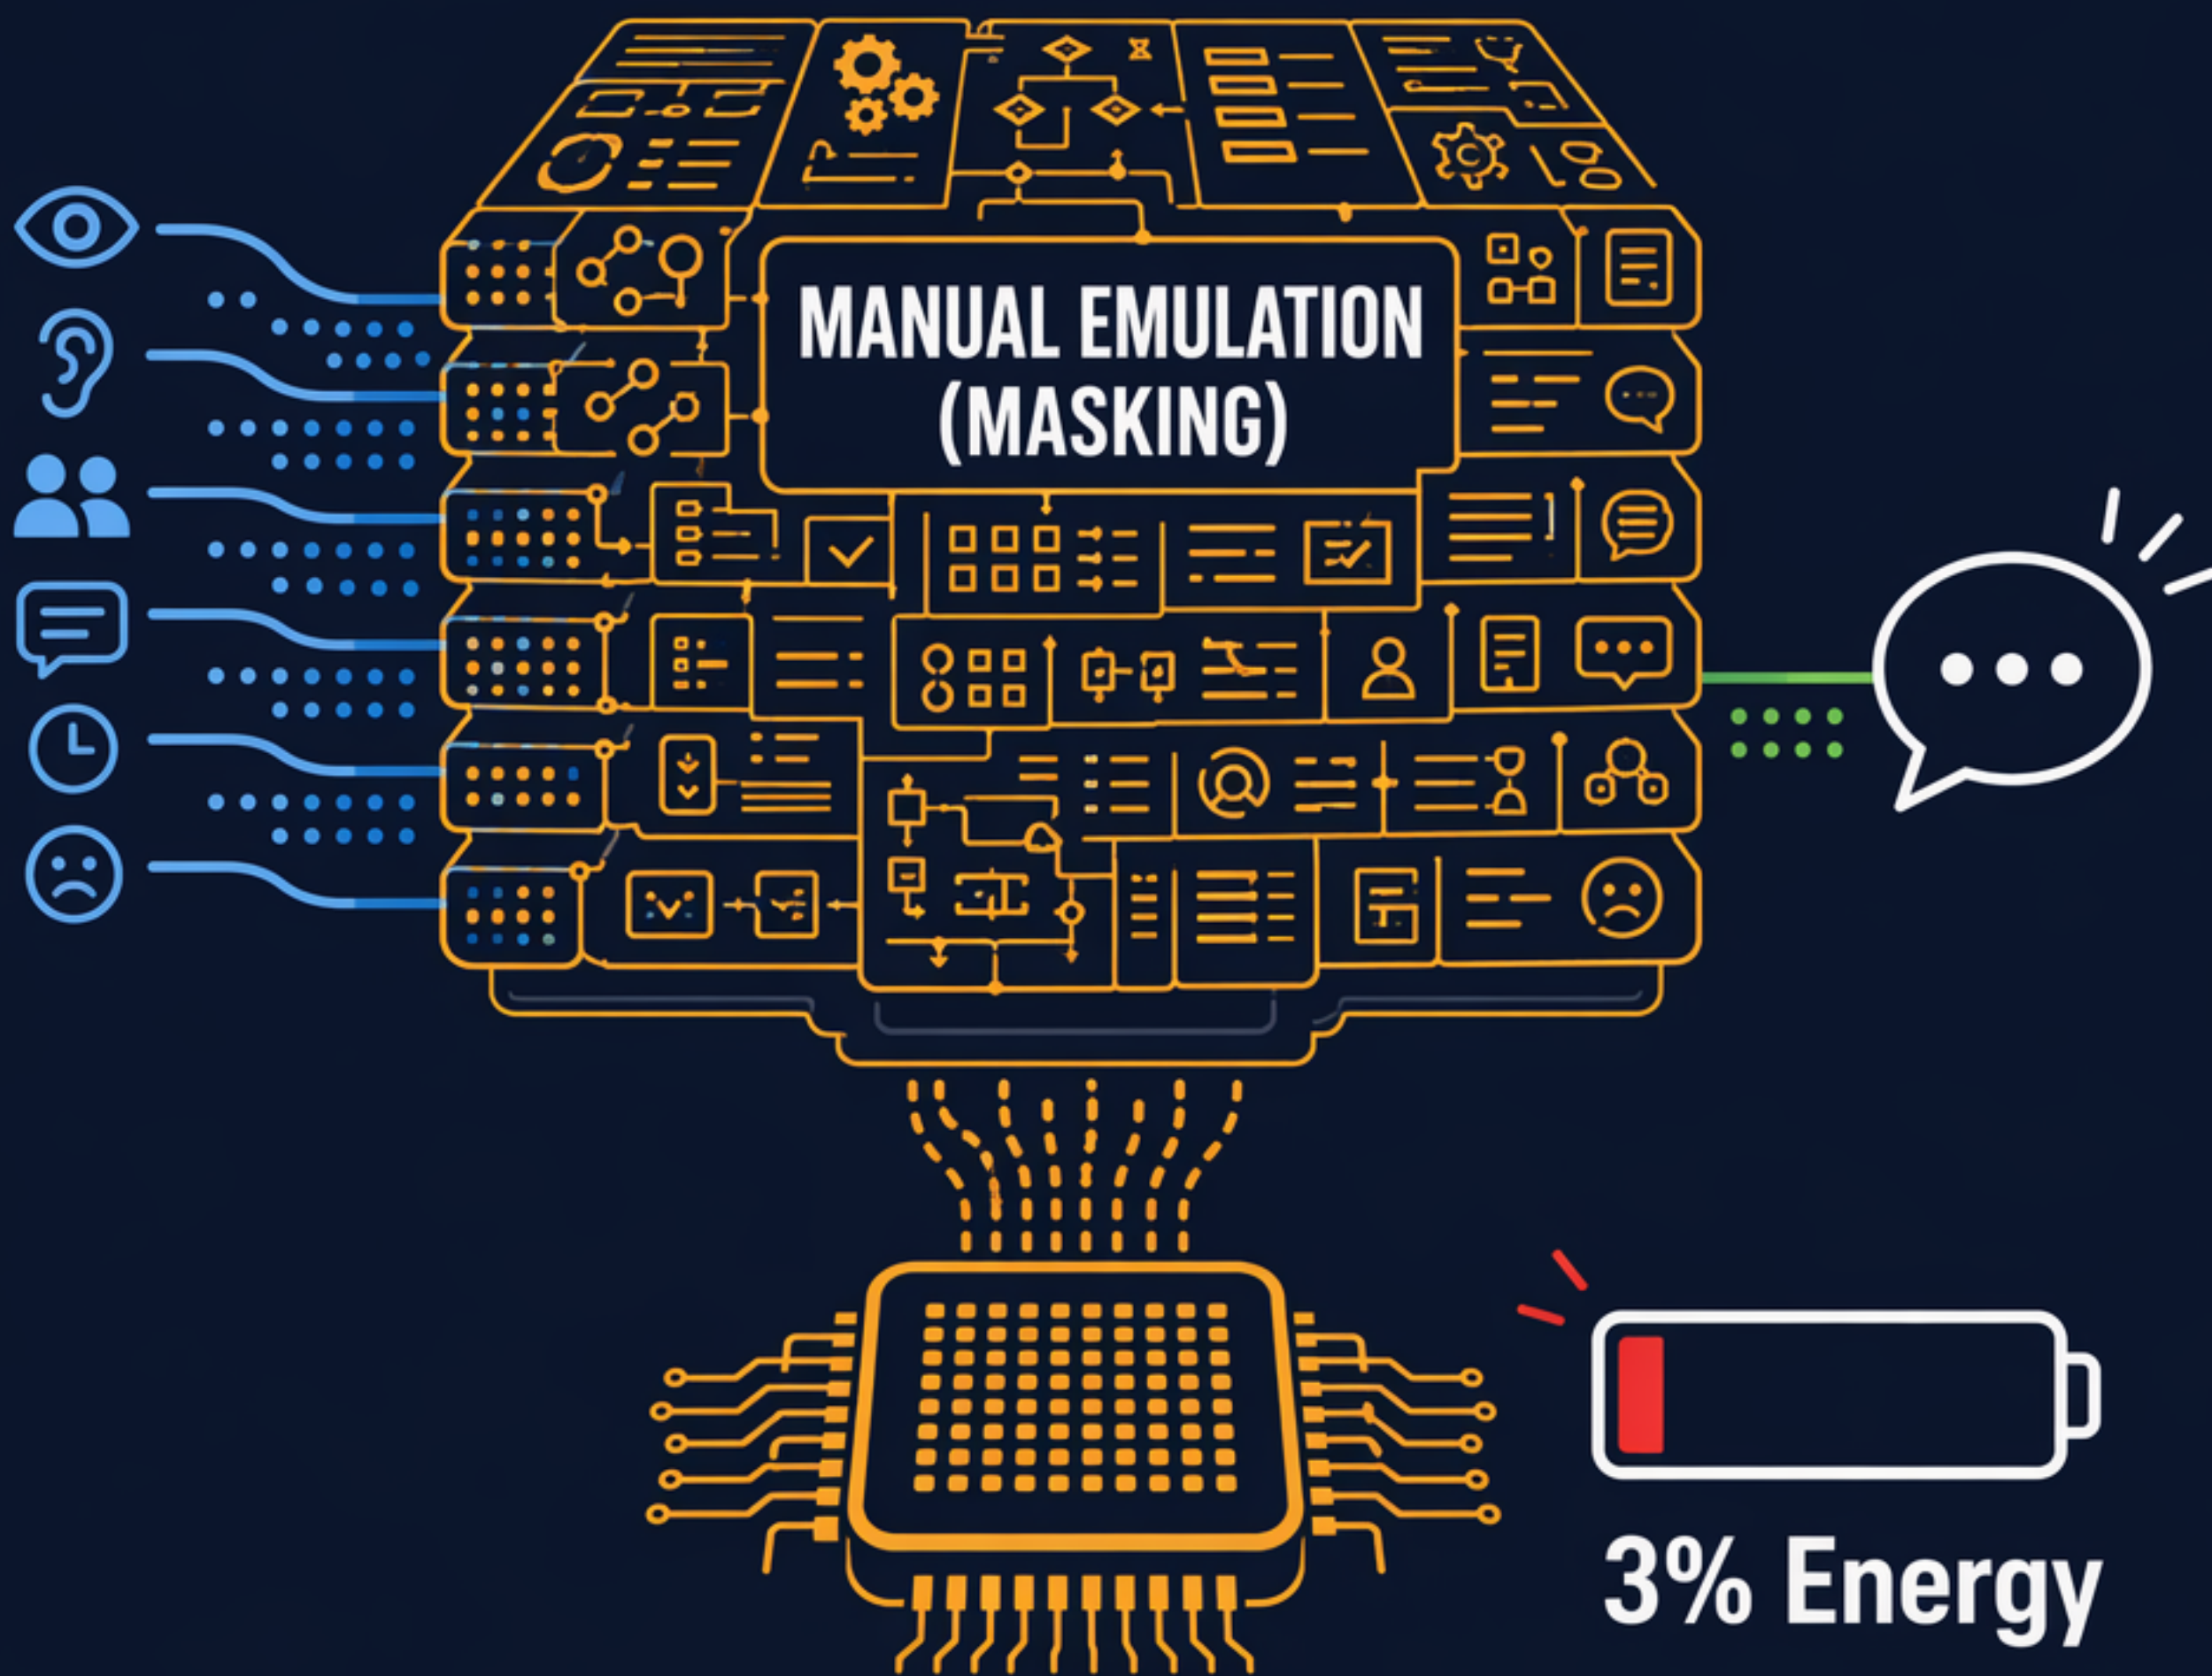

We treat the spectrum like a dial.

Assuming different behaviors mean different conditions.

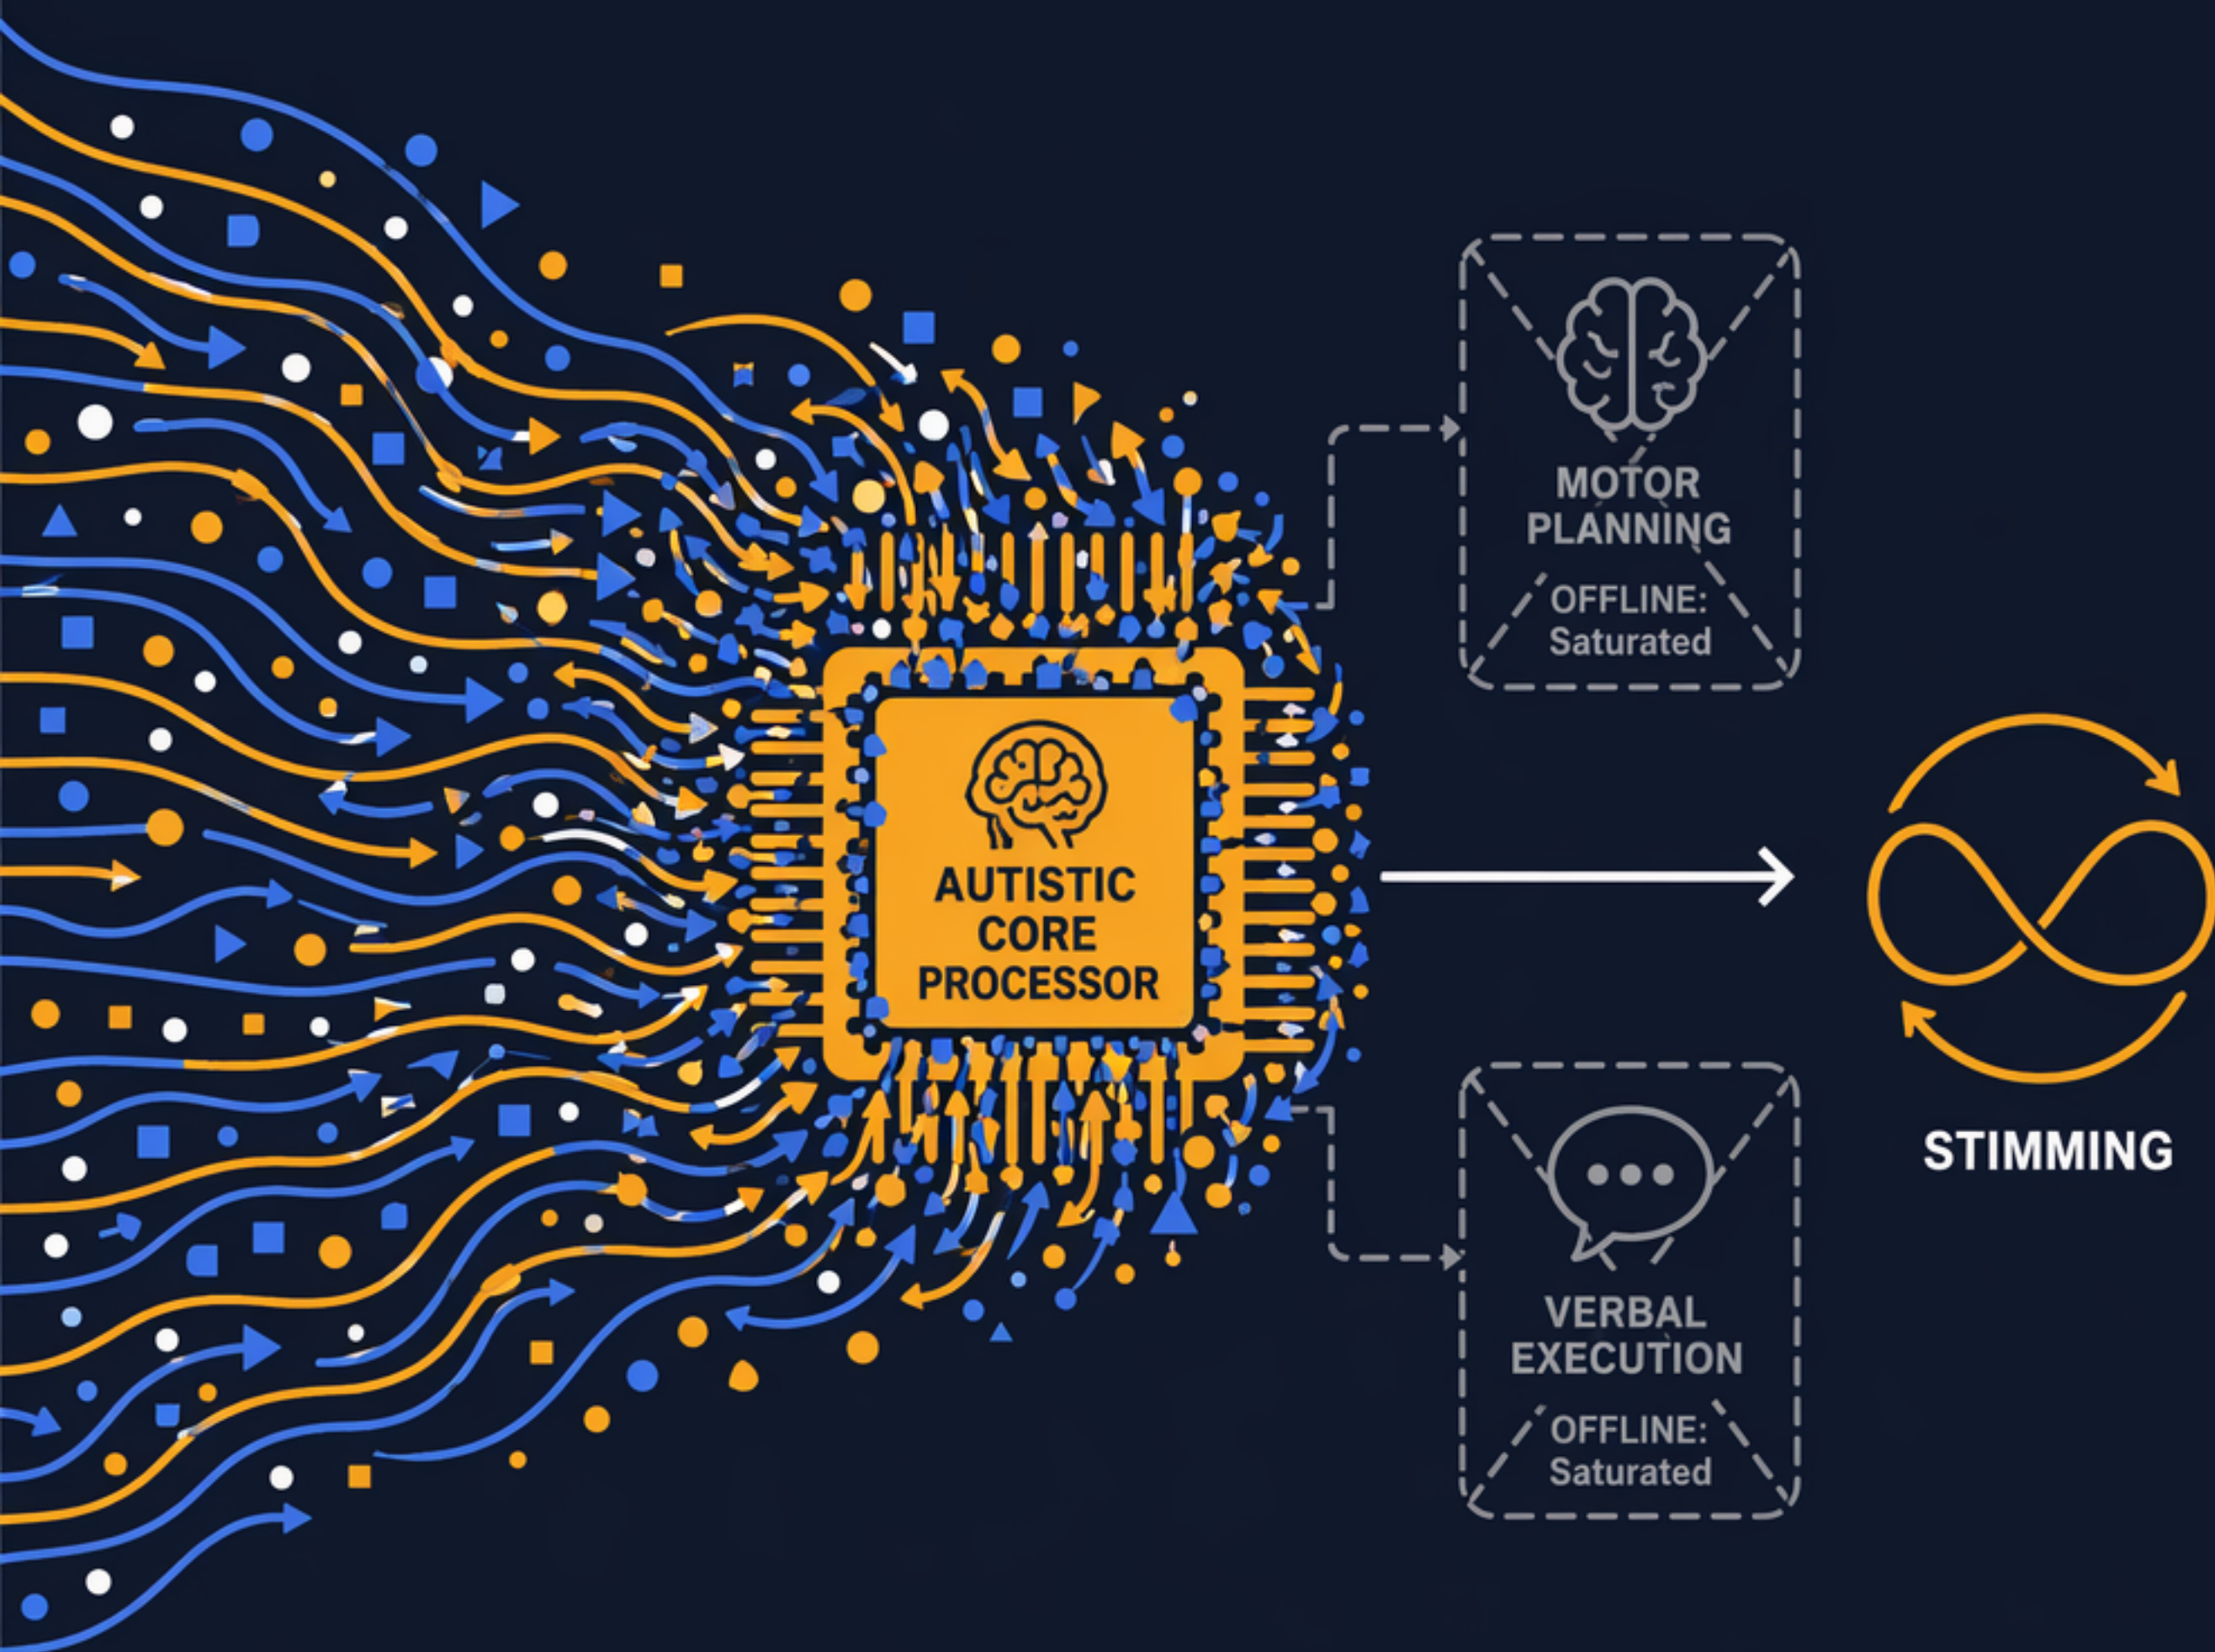

At the core, the architecture is identical.

A high-gain system flooded with unfiltered data.

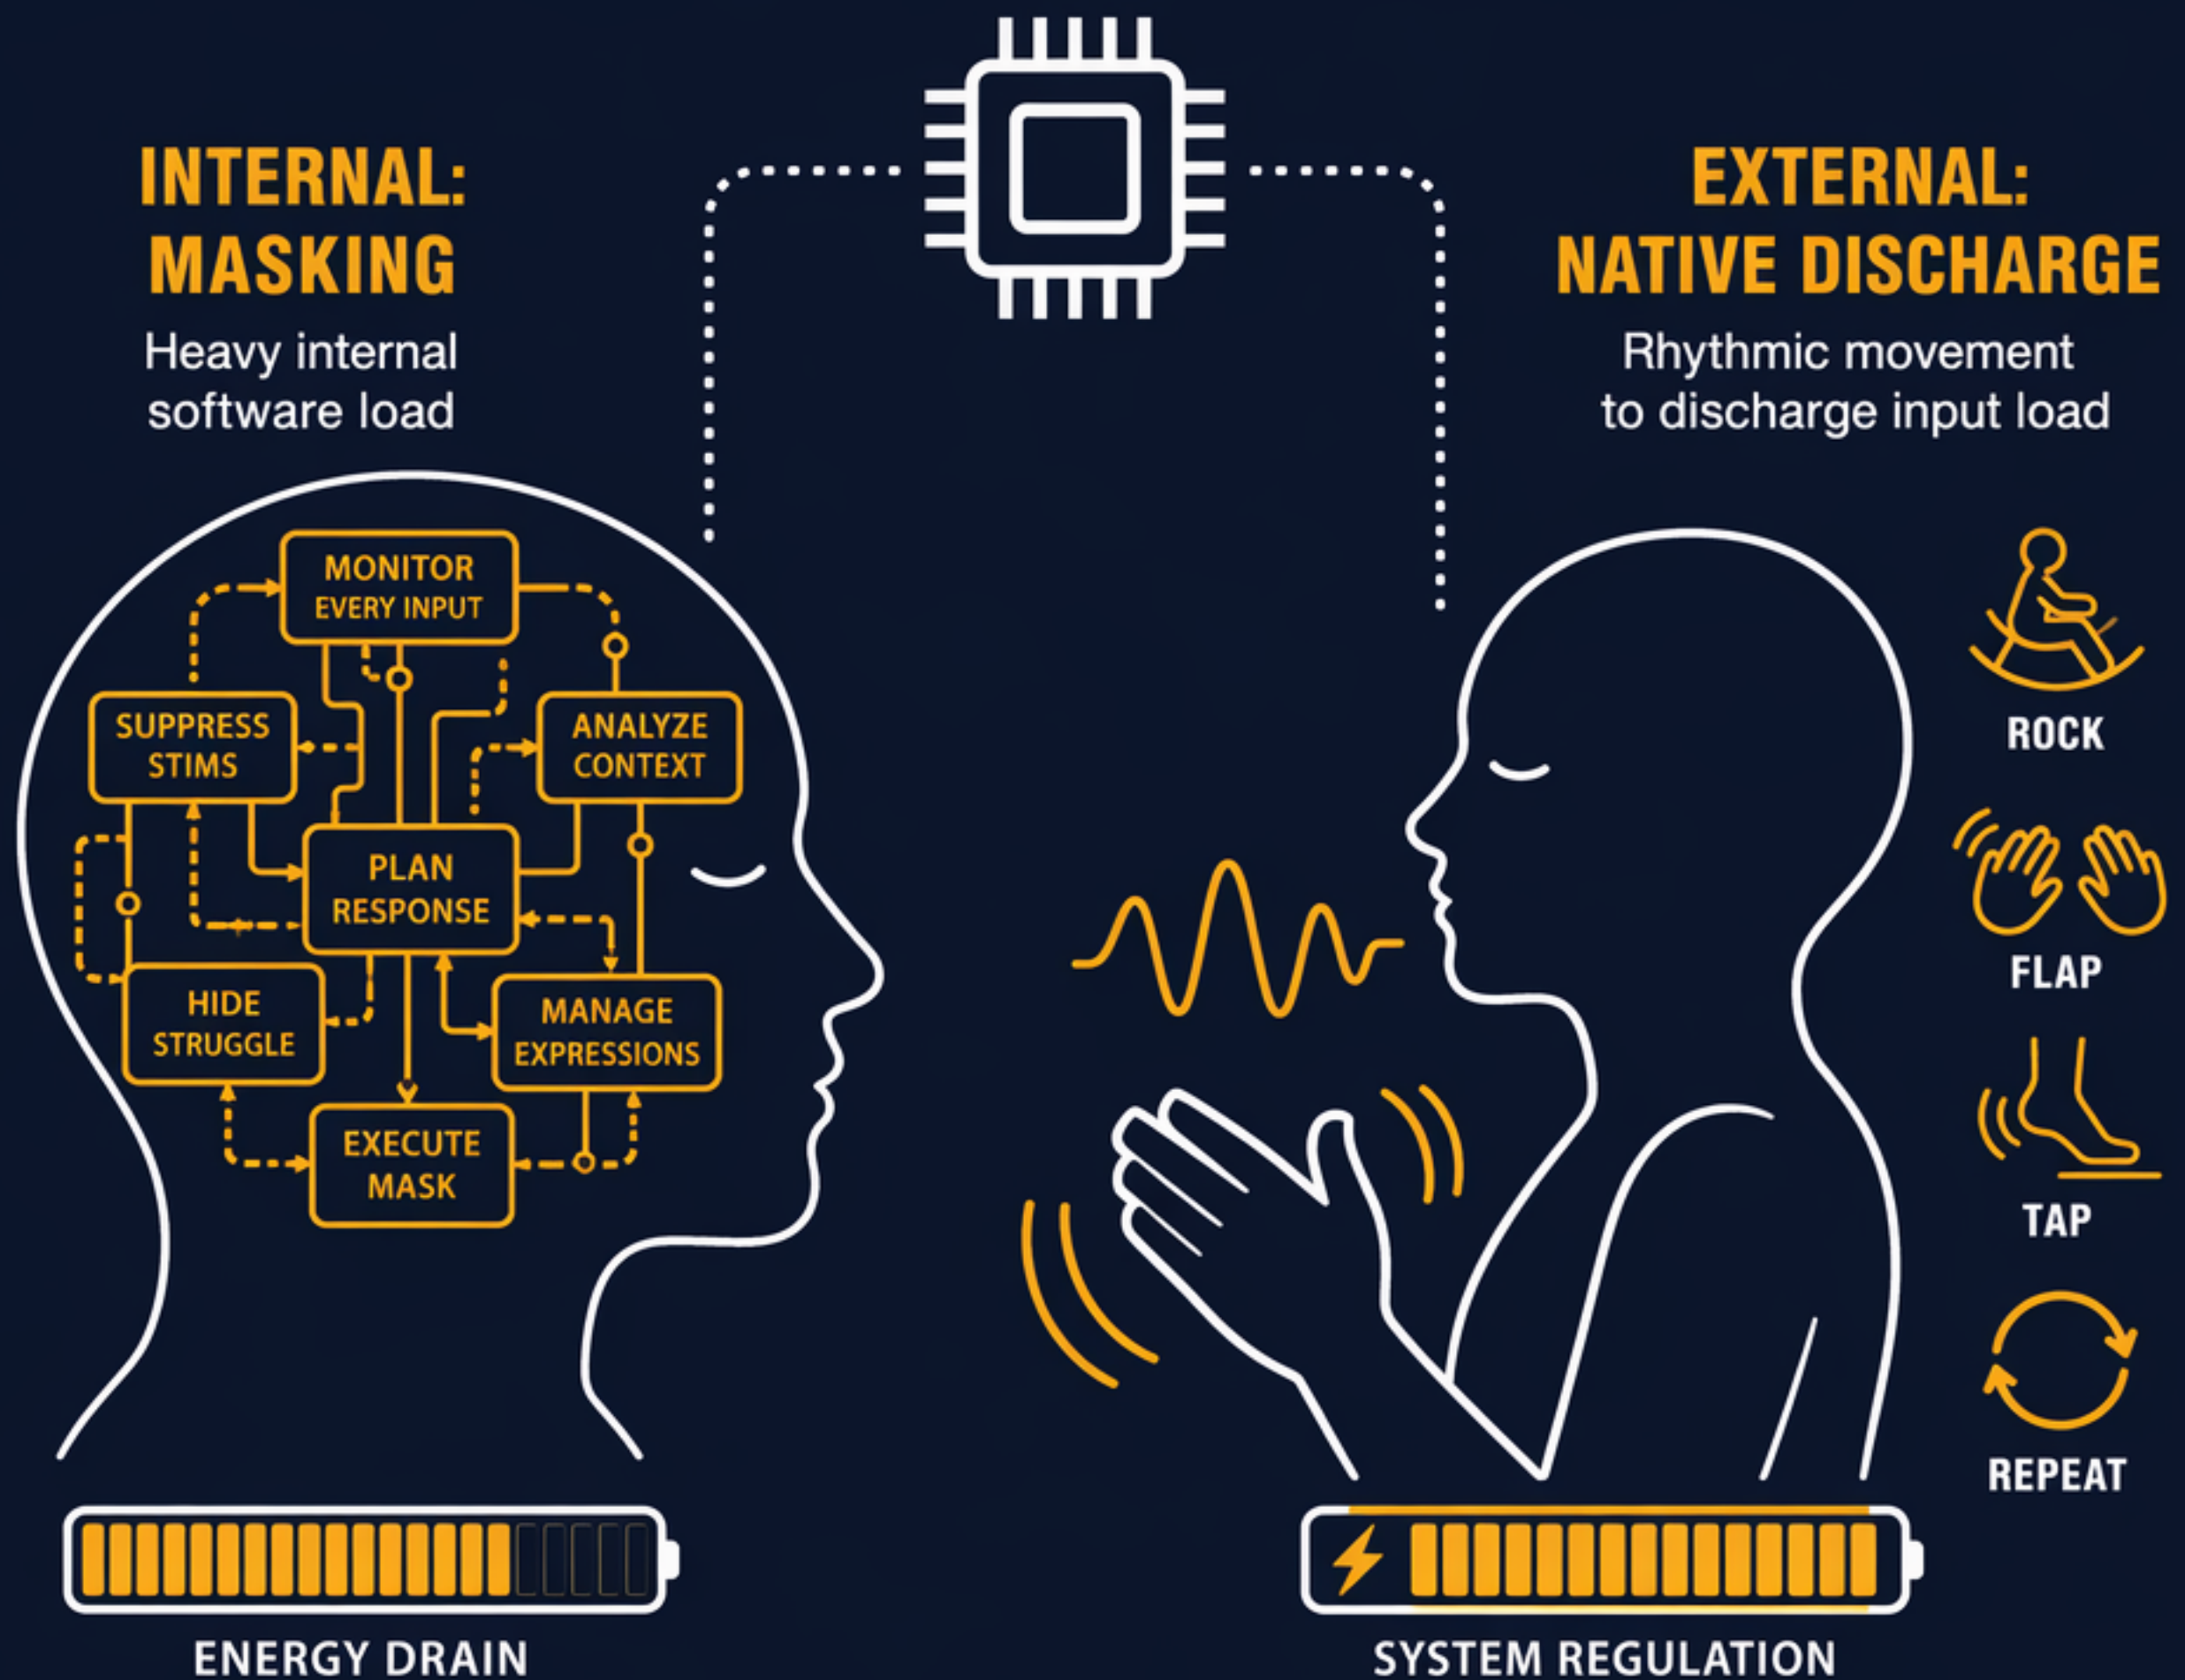

Outcome A: Running an emulation layer.
Standard social behavior delivered at 97% CPU.

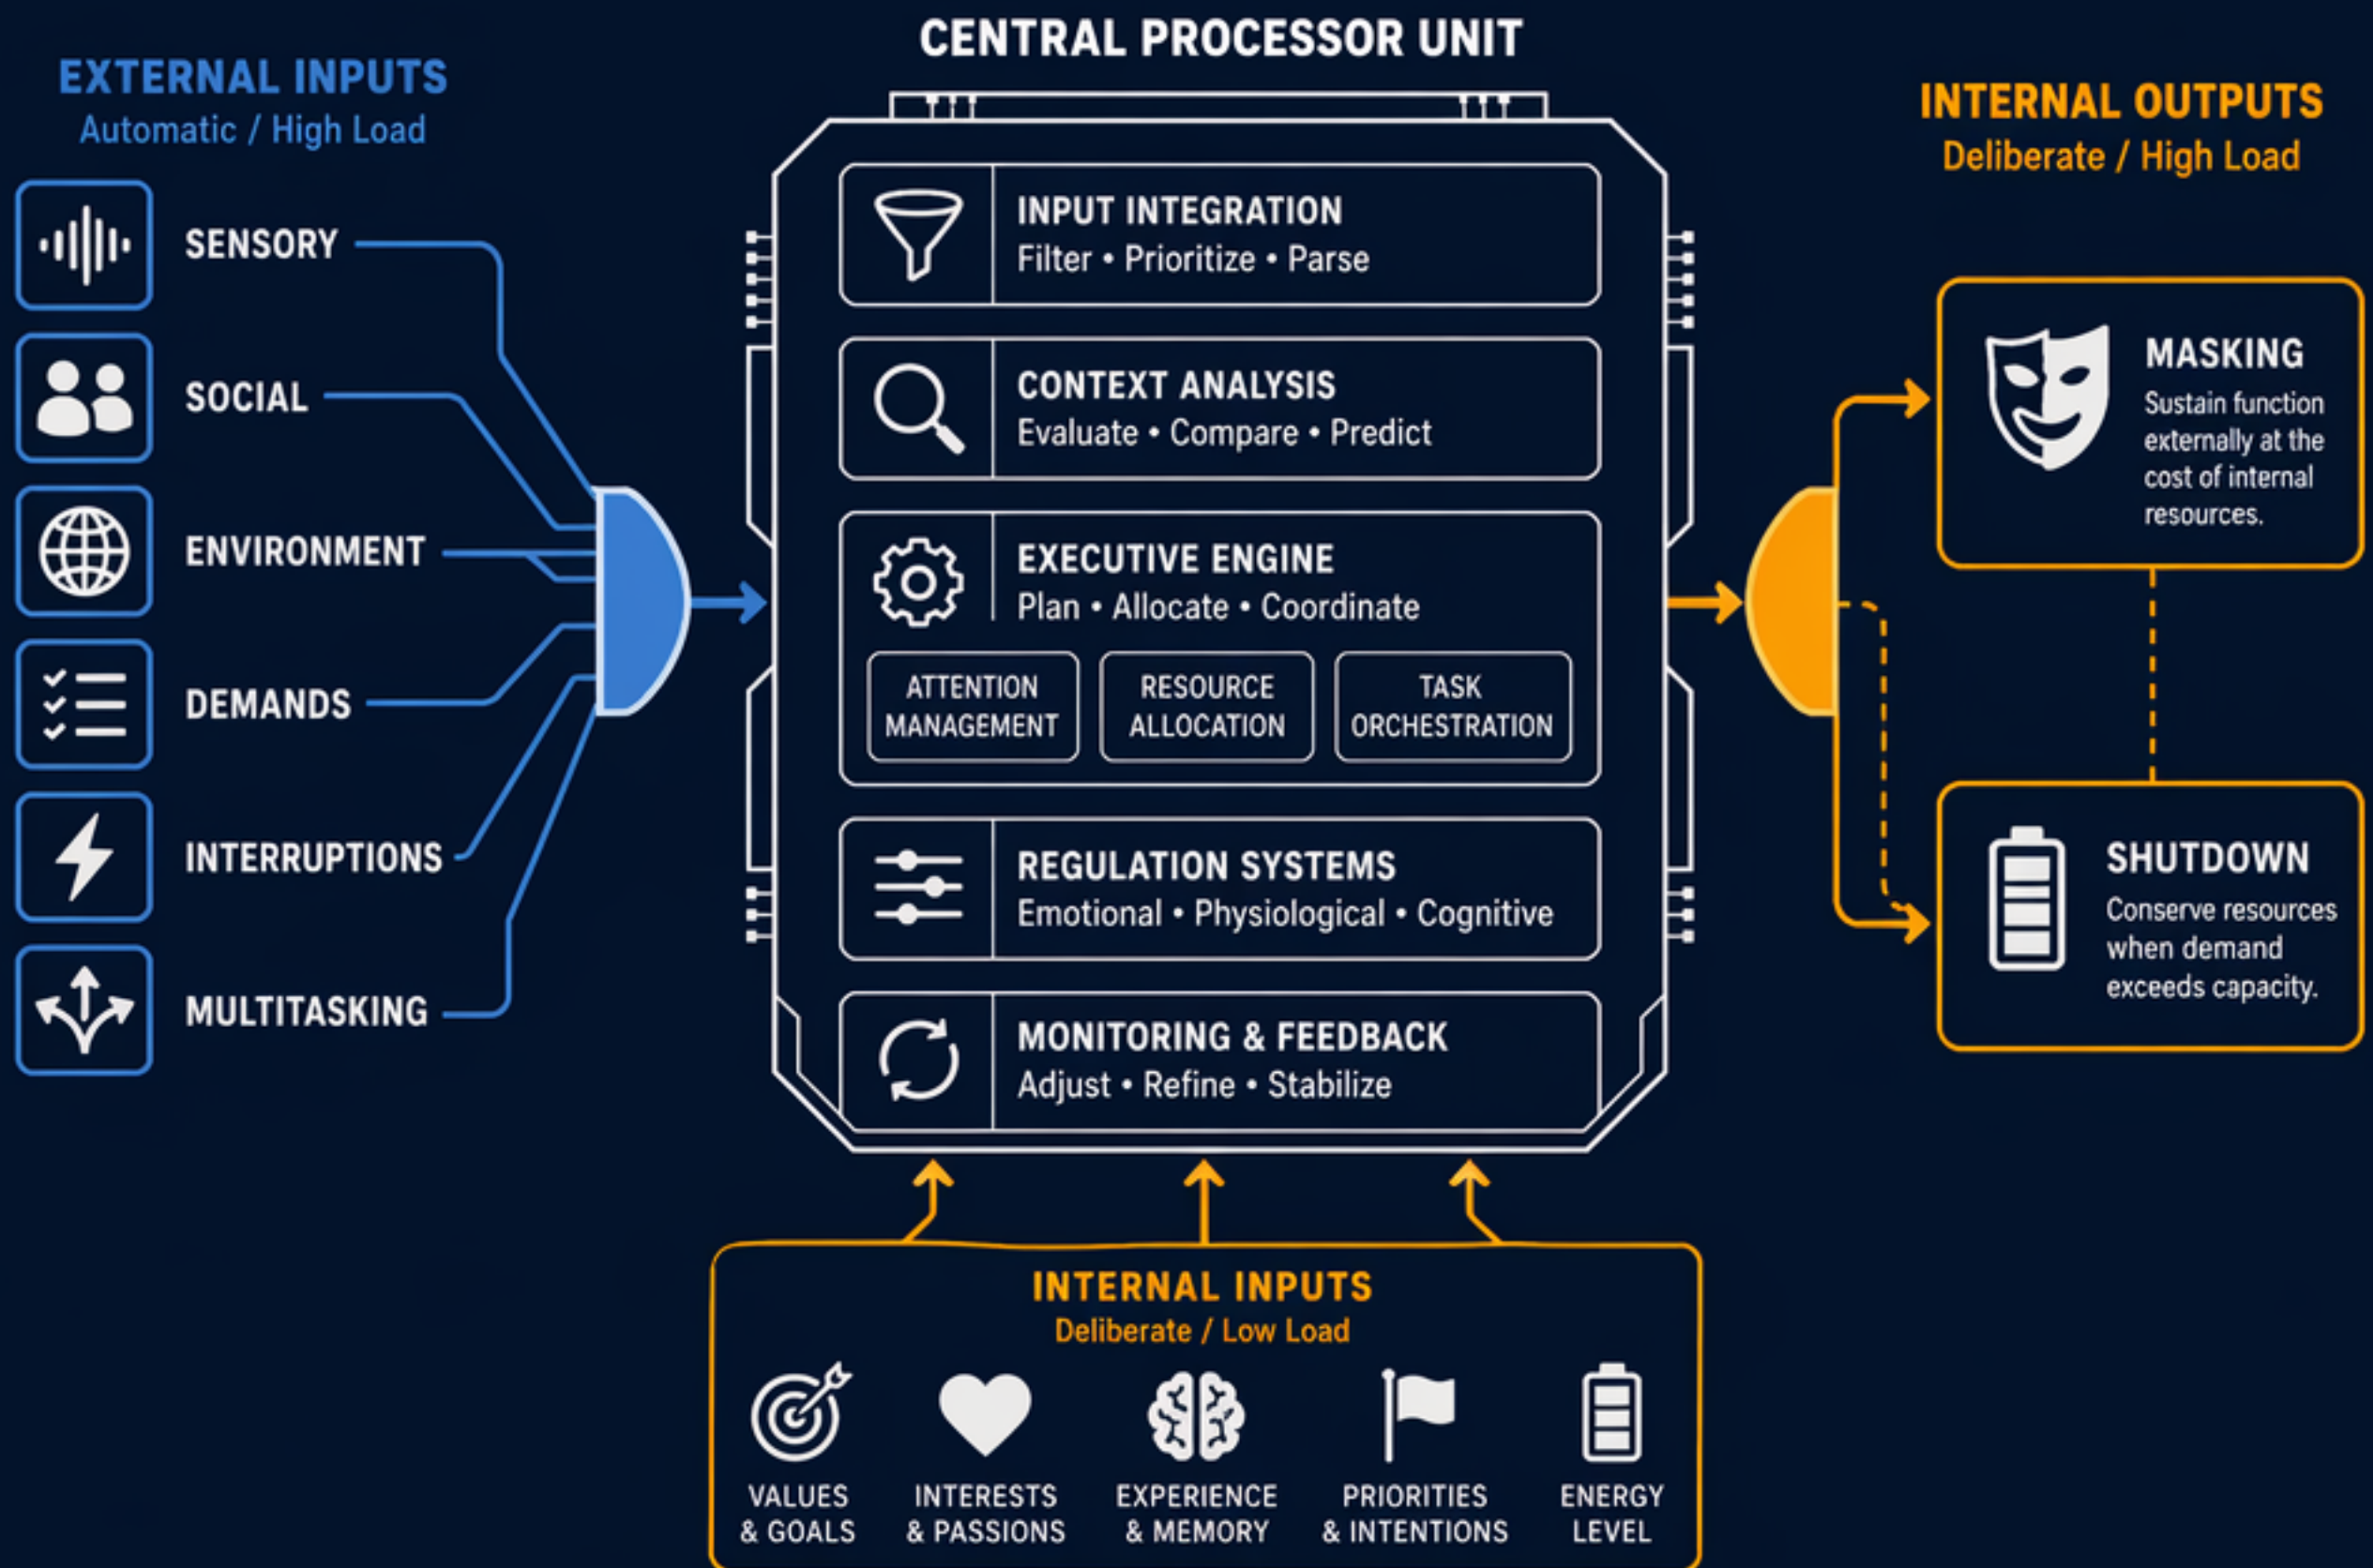

Outcome B: Complete hardware saturation.

Verbal and motor pathways go offline to protect the core.

**Masking is a costly coping mechanism,
not a definition.**

Shutdowns are a thermal throttling defense, not a deficit.

**Same architecture.
Different environmental load.**

Masking and shutdown are two outputs of the same engine.
